

### Artifact 3: Question Redesign

**Original Question:**

Why did you choose computer science engineering and what are your major course concerns this semester?

**Redesign #1:**

What made you feel belonging in computer science engineering and what is making it challenging to feel belonging?

**Redesign #2:**

If there's one thing you want to be changed in classroom to make it more welcoming, what would you think it'd be? How does the current pace of student life treating you and what would you think you'd need more support for?

**Reflection:** Answer the following questions in 3-5 or more sentences:

From your experience, what is the purpose for developing strategic questions and what did you learn from personally engaging with yours's and others' questions?

From my experience, in the classroom and in the activities, I believe that the purpose of developing strategic questions is to find deeper meaning of the problems which might remain unspoken or not spoken enough in a classroom. It drives understanding of a concern in more experiential way rather than objective way, i.e. learning about someone from their experiences rather than mere statements.
